Attorney Docket No. PF010010

#### IN THE CLAIMS

Please amend the claims as follows:

- l. (Original) Method of detecting the reliability of a field of movement vectors of one image in a sequence of video images, characterized in that it includes a stage of calculating a stability parameter Det\_Stab(t) for the field, on the basis of a comparison (4), over two successive images, of the number of occurrences of the majority vectors of the movement-vectors fields of each of these images, a field being defined as stable if the variation in the number of occurrences lies within a predefined bracket, and a stage of deciding on reliability (7) on the basis of this stability parameter.
- 2. (Original) Method according to Claim 1, characterized in that it also includes a stage of calculating a disturbance parameter Det\_Dist(t) for the field, on the basis of a comparison (5), over two successive images, of the number of occurrences of the movement vector corresponding to the majority vector of one of the two images (2, 3), a field being defined as not disturbed if the variation in the number of occurrences lies within a predefined bracket, and in that the decision stage (7) is also based on this disturbance parameter.
- 3. (Original) Method according to Claim 1, characterized in that it also includes a stage of calculating a disturbance parameter Det\_Dist(t) for the field, a field being defined as not disturbed if the variation in the number of occurrences of the zero vector in the movement-vectors field, between two successive images, lies within a predefined bracket, and in that the decision stage (7) is also based on this disturbance parameter.
- 4. (Original) Method according to Claim 1, characterized in that it includes a stage of calculating, for an image (t), a time-domain stability state Stabl\_Stat(t) (6) on the basis of the stability parameters Det\_Stab(t) for this image and of P-1 preceding images (4), a state being declared as stable if a minimum number Q of stable fields is detected

Application Serial No. 10/075,839 Attorney Docket No. PF010010 among these P images, P and Q being integers such that P > Q, and in that the decision stage (7) is also based on this stability state.

- 5. (Currently Amended) Method according to Claim 2, characterized in that it includes, for an image (t), a stage of calculating a disturbance state Dist\_Stat(t) (6), on the basis of the disturbance parameters Det\_Dist (t) for this image and for the-M-1 preceding images (5), a state being declared to be disturbed or not disturbed depending on whether a minimum number L of non-disturbed fields are detected among these M images, M and L being integers such that M > L, and in that the decision stage (7) is also based on this disturbance state.
- 6. (Original) Method according to Claim 5, characterized in that it also includes a stage of calculating a stability parameter Det\_Stab(t) for the field, on the basis of a comparison (4), over two successive images, of the number of occurrences of the majority vectors of the movement-vectors fields of each of these images, a field being defined as stable if the variation in the number of occurrences lies within a predefined bracket, and in that a vector field is declared to be reliable if a stable field and a non-disturbed state are detected.
- 7. (Currently Amended)Method according to Claim 4, characterized in that it also includes, for an image (t), a stage of calculating a disturbance parameter Det\_Dist(t) for the field, on the basis of a comparison (5), over two successive images, of the number of occurrences of the movement vector corresponding to the majority vector of one of the two images (2, 3), a field being defined as not disturbed if the variation in the number of occurrences lies within a predefined bracket, as well as a stage of calculating a disturbance state Dist\_Stat(t) (6) on the basis of the disturbance parameters Det\_Dist(t) for this image and for the M-1 preceding images (5), a state being declared as disturbed or not disturbed depending on whether a minimum number Q of non-disturbed fields are detected or not detected among these M images, M and Q being strictly positive integers, and in that a vector field is declared to be reliable if a stable field, a disturbed and stable state are detected.

Application Serial No. 10/075,839

Attorney Docket No. PF010010

- 8. (Currently Amended) Method according to Claim 1 characterized in that the occurrences of the vectors are relative to the value of the horizontal component of these vectors.
- 9. (Original) Method according to Claim 1, characterized in that the decision stage (7) also takes into account a parameter for the detection of saturation of the movement-vectors field.
- 10. (Original) Method according to Claim 1, characterized in that the decision stage (7) also takes into account a parameter for detection of a change of scene in the video sequence.
- 11. (Original) Device for detecting reliability of a movement-vector field of one image from an image sequence, characterized in that it includes:
- means (4) for comparing, over two successive images, the number of occurrences of the majority vectors of the movement-vectors fields of each of these images,
- means for calculating a stability parameter Det\_Stab(t) for the field, on the basis of the comparison result, a field being defined as stable if the variation in the number of occurrences lies within a predefined bracket,
  - and means for deciding on reliability (7) on the basis of this stability parameter.
- 12. (Original) Device according to Claim 11, characterized in that it also includes:
- means (4) for comparing, over two successive images, the number of occurrences of the movement vector corresponding to the majority vector of one of the two images,
- means for calculating a disturbance parameter Det\_Dist(t) for the field, a field being defined as not disturbed if the variation in the number of occurrences lies within a predefined bracket,
- the means for deciding on reliability (7) also taking this disturbance parameter into account.

- Application Serial No. 10/075,839 Attorney Docket No. PF010010
  13. (Original) Frequency converter, characterized in that it comprises a device according to Claim 11.
- 14. (Original) Video coder, characterized in that it comprises a detection device according to Claim 11.
- 15. (New) Method according to Claim 2 characterized in that the occurrences of the vectors are relative to the value of the horizontal component of these vectors.
- 16. (New) Method according to Claim 3 characterized in that the occurrences of the vectors are relative to the value of the horizontal component of these vectors.

### **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:
BLACK BORDERS
☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
☐ FADED TEXT OR DRAWING
BLURRED OR ILLEGIBLE TEXT OR DRAWING
SKEWED/SLANTED IMAGES
☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS
☐ GRAY SCALE DOCUMENTS
LINES OR MARKS ON ORIGINAL DOCUMENT
REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
OTHER:

### IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
